Aisultan Zhakupbayev

Almaty, Kazakhstan | +7 (707) 411-4765 aisultanzhakupbaev@gmail.com github.com/Aisdz

Education

SDU University Almaty, Kazakhstan
B.Sc. in Statistics and Data Science *Expected May 2027*

Technical Skills

Languages: Python, R, SQL, PL/SQL
ML / DL: Scikit-learn, XGBoost, TensorFlow, Keras · CNNs, Transfer Learning, Ensemble Methods
Data: Pandas, NumPy, Matplotlib, Seaborn
Backend & Tools: Flask, FastAPI, Oracle APEX, Git

Projects

Krisha.kz — End-to-End ML Pipeline | Python · XGBoost · BeautifulSoup 2026

- Scraped **7,000** apartment listings from krisha.kz across 17,375 unique URLs with auto-retry on bans and checkpoint saving every 500 records.
- Trained XGBoost model on 18 features (area, district, floor, renovation, etc.) achieving **R^2 0.872 / MAE 6.9M ₸**; outperformed Random Forest baseline by +**9% R^2**.
- Deployed as a Telegram bot (aiogram) with two modes — price estimation and seller price audit — serving cities across Kazakhstan.
- Full pipeline open-sourced on GitHub: scraping → feature engineering → model training → production bot.

Smart Waste Detection System | Python · TensorFlow · Flask 2026

- Built an image classification system for 10 waste categories using transfer learning (EfficientNetB0), achieving **92.7% test accuracy**.
- Outperformed classical ML baselines (Logistic Regression, SVM, Random Forest) by +**30–35%** accuracy (60% → 93%).
- Improved generalization on a ∼10K image dataset using augmentation (flip, rotation, zoom) and Dropout.
- Deployed as a Flask web app with real-time predictions and top-3 confidence scores.

Banking Management System | Oracle APEX · SQL · PL/SQL 2025

- Designed a relational database handling **100**+ records across **12**+ entities with enforced constraints and data integrity.
- Implemented core banking logic (transactions, loans, fraud detection) using stored procedures, triggers, and modular PL/SQL packages.
- Automated balance updates, fraud-based account freezing, and audit logging; built Oracle APEX dashboards for loan simulation and customer management.

Box Office Revenue Prediction | R · Regression 2025

- Built a multiple linear regression model to predict movie revenue from budget, popularity, and genre features.
- Performed data cleaning, feature encoding, and regression diagnostics to validate model assumptions.

Languages

Kazakh: Native **Russian:** Fluent **English:** Advanced
